Technical Leader and Video Game Creator with over 18 years' experience leading teams and developing and shipping world-class software.

SUMMARY

Technical leader and video game creator with 18 years of experience driving large-scale platform innovation across digital music, advertising, AR/VR, and game development. Known for unifying engineering, product, and creative teams to deliver high-impact solutions with global reach. Proven ability to lead cross-functional programs, optimize complex systems, and ship reliable, scalable software across multiple industries.

AREAS OF EXPERTISE

Software Development • Game Development • Digital Music • AR/VR • Real-time Systems Program Management • Roadmaps • KPIs • Cross-Functional Leadership • Technical Mentorship • Scalability • Reliability Engineering • Distributed Systems • SOA • Performance Optimization • Creative Production • Game Design • Music Recording • Drumming

ACCOMPLISHMENTS

- Spearheaded Amazon's Virtual Try-On for Shoes, improving real-time rendering performance by 30% and reducing load time from 700ms to 300ms.
- Led multi-year AWS infrastructure optimization for Amazon Music, reducing costs from \$300K to \$20M while improving audio delivery performance.
- Directed Amazon Advertising's migration from monolithic architecture to SOA, enabling 20+ teams to scale globally and launch new features faster.
- Designed and standardized automated load-testing frameworks, reducing validation time for high-traffic events by 25%.
- Founded Ameba Games Studio, shipping three games in six months and ranking top 25% in art and top 30% in creativity in the GMTK Game Jam (9,583 entries).

CAREER PROFILE

Ameba Games Studio, Founder (2024 – present)

Amazon Music, Engineering Excellence (2022 – 2024)

Amazon Fashion Tech, Virtual Try-On (2021 – 2022)

Amazon Advertising, Advertising Console (2015 – 2021)

Banco de Chile / El Mercurio / I2B, Lead Developer (2009 – 2015)

RECENT EXPERIENCE

Ameba Games Studio, Founder

(2024 – present)

Founded Ameba Games Studio to create memorable, craft-driven experiences unconstrained by genre or platform, establishing a creative outlet beyond big-tech program management

- Built [AmebaCore](#), a reusable Unity-compatible C# engine layer with clean separation between engine and game logic, incorporating design patterns, deterministic pipelines, and a modular movement-and-combat system capable of compiling independently of Unity.
- Applied enterprise-grade engineering discipline to game development—TDD, documentation, tagged releases, and rigorous version control—while shipping three games in six months and earning top-25% art and top-30% creativity rankings in the GMTK Game Jam (9,583 entries).
- Developed multiple prototypes, including a 2D platformer highlighted for its visual direction, and began production on original IP featuring advanced fighting-game mechanics and a reimagined futuristic South America where the Inca Empire fully evolved into an advanced society.

Amazon Music, Engineering Excellence

(2022 – 2024)

Led large-scale platform optimization, cross-team engineering programs across Amazon's digital music. Directed initiatives spanning audio delivery performance, distributed systems, and global infrastructure readiness for high-traffic events.

- **Directed Amazon Music's multi-year engineering excellence program**, optimizing AWS infrastructure across streaming, encoding/decoding, storage, and search. Built the org-wide roadmap and raised annual savings targets from \$6M to \$14M and then \$20M, shifting leadership from budget cuts to a system-specific hardware-efficiency model adopted by Finance and Music executives.
- **Partnered with principal engineers on migration and optimization strategies**, co-authored development and troubleshooting docs, and led the cross-team triage process that accelerated delivery and unblocked teams. Expanded participation from 6 to 15 groups and built a developer community sharing optimization techniques and best practices.
- **Enabled major innovation through the new efficiency framework**, including a principal-engineer proposal for a 40% storage-cost reduction. Reduced infrastructure spends from **\$300K to \$20M** while improving performance, reliability, and engineering engagement across the organization.
- **Transformed Amazon Music's scaling readiness** for Prime Day and end-of-year surges by overhauling and automating load-testing, data generation, and OKR frameworks. Cut validation time by 25%, expanded system coverage by 50%, and delivered **zero scaling incidents** from 2022–2024.

Amazon Advertising, Advertising Console

(2015 – 2021)

- **Led Amazon Advertising's multi-year transition from monolithic architecture to SOA**, building the migration roadmap and serving as the single point of alignment for 20+ engineering teams across the organization. Directed risk management, status reporting, and executive communications while partnering with senior engineers to evaluate technical approaches and justify the chosen migration strategy.
- **Co-authored development and troubleshooting documentation**, established and led the cross-team triage process, and owned escalations and broad communications to keep teams unblocked and accountable. These mechanisms accelerated delivery beyond initial expectations, enabling expansion of the migration scope from 8 to 20 applications.
- **Drove adoption of new telemetry systems** by streamlining intake workflows with partner teams and led the deprecation of legacy UI libraries in favor of a unified React-based component system. These efforts enabled 100% system coverage within one year, standardized user experience across the Ads Console, and significantly improved platform scalability and feature velocity.
